

## Part 2

NOT conflict-serializable.

$W_1(B)$  is between  $R_3(B)$  and  $W_3(B)$ .

Because  $R_3(B)-W_1(B)$  forms a read-write conflict and  $W_1(B)-W_3(B)$  forms a write-write conflict, it can not be transformed into a serial schedule by non-conflicting actions.
